

## Ambidextrous Mouse DXT

### DESCRIPTION

This ambidextrous mouse can be easily used as a right hand mouse or a left hand mouse.

An ergonomic mouse with a high precision vertical mouse design ensures your hand is in a neutral relaxed position.

Using the same mouse you can give your right hand a rest. Help Prevent and Relieve RSI

### Ambidextrous Mouse Benefits

A quick click of a button and it becomes a left hand mouse or a right hand mouse. With this ambidextrous mouse the one user can use both hand for intensive mousing work.

The DXT ambidextrous mouse is designed for comfort and ease of use. The left and right click button are the same as a standard mouse. So you can smoothly change hands and still use this mouse intuitively.

Its ergonomic design allows accurate and precise cursor movements by allowing finer large movements of the fingers wrist and forearms.

The small muscles and joints in the fingers have greater information processing abilities for movement and sensation than other body parts. The larger muscle groups that operate the elbow and shoulder are adapted for power and a larger range of movement.

The smaller muscle groups that operate the fingers and thumb have greater agility.

Adopting the precision grip (Napier, 1956) where index finger and thumb work closely together allows efficient, accurate cursor control.

Because this vertical mouse is manipulated by the fingers and thumb it enables a precision grip which improves speed and accuracy. Resulting in improved productivity.

You use the pads of the fingers or gross arm movements or a combination of the two to position and move this ergonomic mouse.

This spreads the postural loading throughout the upper limb and reduces static activity. Helping to reduce the incidence of upper limb disorders.

This ambidextrous mouse can be used by most people as it uses the chuck function of the fingers and thumb and avoids filling the palm of the hand.
